## Common name

Dolichos pea, Common dipogon

## Family

Fabaceae

## Where found

**Forest, woodland, heath**, grassy areas, roadsides, coastal environs, disturbed sites, and stream banks. Coastal. Sydney area away from the coast and the Blue Mountains.

## Notes

**Introduced perennial** climber with stems to 3m long. Young stems densely hairy; older stems sparsely hairy. Leaves 6.5-20 cm long, **alternating** up the stems, **compound**, with 3 leaflets, each 3-10 cm long, 10-70 mm wide, more or less hairless, lower surface paler. Flowers pink to mauve or pinky purple, rarely white, 10-17 mm long, pea shaped, with 5 **petals**, 2 joined together to form the **keel**. Flowers in many-flowered clusters to about 25 cm long. Flowers Winter to Summer.

General Biosecurity Duty all NSW. General Biosecurity Duty with additional restrictions in the South East area, NSW.
