Gardens Board

Common name

Pymgy sundew, Tiny sundew

Family

Droseraceae

Where found

Wet **heath** and damp soil near swamps. Coast and ranges north from Ulladulla, and south and west of Eden.

Notes

Herb to 0.45 m high, **rhizomatous**. Stems hairless. Leaves in a basal **rosette**, 1–2 mm in diameter, round, **peltate** with the leaf stalk often attached near the margin, upper surface covered with **glandular** hairs that trap insects. **Stipules** divided into 3 at the top, 3–5 mm long. Flowers with 4 white **petals** each about 1.5–3 mm long, single. Flowers Winter to Summer.
