Plants of South Eastern New South Wales

Common name

A guinea flower

Family

Dilleniaceae

Where found

Heath on sandstone. Coast, ranges, and the eastern tablelands, mainly north of Kiama.

subsp. *cistiflora*: In the transition area between **heath** and open **forest** or **woodland**. Sydney area south to the Illawarrra Highway. Blue Mountains south to the Southern Highlands. Rarely elsewhere.

subsp. *quadristaminea*: Seepage areas with low heath, often under open woodland. Dry sandy or gravelly slopes. Blue Mountains National Park.

Notes

Shrub to 0.3 m high, sprawling to slightly scrambling. Stems wiry becoming stiff, with pronounced more or less flanged leaf bases continuing down the stems, hairless. Leaves alternating up the stems, 0.16–1.45 cm long, about 1 mm wide, upper surface hairless, margins rolled down, lower surface not visible except for the slightly bulging central vein. Flowers with 5 yellow petals each 4.5–12.4 mm long. Stamens 4-7, in one cluster. Carpels 2, hairless, styles attached on the sides of the carpels near the top, and curved up and then erect; to both sides of the anthers. Flowers stalkless, single at the tops of the stems. Flowers mainly Aug.-Oct., and sporadically through the year.

subsp. cistiflora: Leaves with scattered warts, at least below. Stamens 6, rarely 7 or 5.

subsp. quadristaminea: Leaves smooth or with warts along the margins and towards the tips. Stamens 4-5.

PlantNET description of species and key to subspecies: http://plantnet.rbgsyd.nsw.gov.au/cgi-bin/NSWfl.pl? page=nswfl&lvl=sp&name=Hibbertia~cistiflora (accessed 20 January, 2021)

Description partly based on: Toelken, H.R. & Miller, R.T. (2012), Notes on *Hibbertia* (Dilleniaceae) 8. Seven new species, a new combination and four new subspecies from subgen. *Hemistemma*, mainly from the central coast of New South Wales. *Journal of the Adelaide Botanic Gardens* 25: 86-89
