Common name

Wedge guinea flower

Family

Dilleniaceae

Where found

Open **forest**, **woodland**, and rocky sites. Coast, ranges, and the eastern edge of the tablelands.

Notes

Shrub to 0.3 m high, sprawling to **prostrate**, often forming mats to 50 cm diameter. Stems usually hairless, sometimes hairy with **simple** short hairs. Leaves **alternating** along the stems, 0.4–3 cm long, 3–14 mm wide, hairless, occasionally hairy with short hairs, tips rounded to more or less notched, occasionally pointed, margins usually toothed or lobed. Flowers with 5 yellow **petals** each 5.2–10.4 mm long. **Stamens** 20–25, in groups around the **carpels**. Carpels 2–3, hairless. **Sepals** hairless. Flowers single, mainly at the ends of the stems, sometimes on short shoots, stalkless. Flowering: spring to autumn.

Rare Vic.
