Common name

Yellow Pennywort

Family

Araliaceae

Where found

Woodland, shrubland, rocky areas, and moist sites. Western Slopes and the Tumut district.

Notes

Spreading to **erect annual** herb to 0.15 m high and in diameter, usually bright green to yellowish green. Stems usually branching from the base, hairless or hairy. Leaves **alternating** up the stems, to 20 mm in diameter, deeply divided or **dissected** into 3 or 5 lobes or **segments** each 0.2–0.6 cm long, tips 3-toothed, teeth blunt or with very short thickened points, **lateral** segments often 2-lobed; surfaces hairless or with a few long scattered hairs on one or both surfaces. Flowers small, with 5 yellow **petals**. **Umbels** usually stalkless, 3–6-flowered, 3–5 mm in diameter. Flowers spring and summer.

Family was Apiaceae.
