## Common name

Angled lobelia

## Family

Campanulaceae

## Where found

Damp situations including wet **heath**, along streams, swamp margins, and seepage areas on coastal cliffs. Mainly coast and ranges. Occasionally on the tablelands.

## Notes

Sprawling or **prostrate**, occasionally upright, **perennial** herb to 0.5 m high. Stems often rooting at the **nodes**, angled or with narrow **wings**, often reddish or purplish, hairless. Leaves **alternating** along the stems, 1–8.5 cm long, 1.5–20 mm wide, margins wavy and more or less toothed. Flowers violet, mauve, blue, pink, or almost white, 5–13 mm long, tubular, the tube split almost to the base on the upper side, 2-lipped, the upper lip with 2 small narrow lobes, the lower lip with 3 **spreading** lobes. Flowers single. Flowers November–July.

Was **Lobelia alata**.

Family was Lobeliaceae.
