

Plants of South Eastern New South Wales

Flowers. Australian Plant Image Index, Australian Tropical Rainforest key

Flower cluster and leaves. Australian Plant Image Index, Australian Tropical Rainforest key

Fruit and leaves. Australian Plant Image Index, Australian Tropical Rainforest key

Tree. Photographer Marco Schmidt, Burkina Faso

Common name

Mango

Family

Anacardiaceae

Where found

Near habitations. Coastal north of Wollongong.

Notes

Introduced tree to 25 m high with a dense rounded **crow**n. Fruit fleshy. Branchlets almost hairless. Leaves **alternating** up the stems, sometimes opposite each other or clustered at the ends of the branchlets, mostly 10–30 cm long, 20–70 mm wide, hairless, more or less leathery, margins **entire** and more or less wavy, tips pointed or blunt. Flowers bisexual and male on the same plant. Flowers reddish or yellowish, about 4-5 mm in diameter, usually with 5 **petals**. Flowers in branched clusters mostly 10–25 cm long. Fruit yellow to reddish, obliquely oval, mostly 10-15 cm long.
