Common name

Tree Tobacco

Family

Solanaceae

Where found

Woodland, shrubland, open areas, disturbed areas, and moist sites. Mostly Sydney area. Occasionally on the tablelands and Western Slopes.

Notes

Introduced short lived treelike **shrub** to 6 m tall. Stems hairless, often **glaucous**. New growth very sparsely hairy. Leaves **alternating** up the stems, 4-35 cm long, 5-80 mm wide, glaucous, hairless, tips pointed or blunt, stalks usually less than 6 cm long, cylindrical or narrowly **winged** near the leaf **blades**. Flowers yellow, 8–13 mm in diameter, tubular, the tube 20–40 mm long, with five lobes. Flowers in a short branched cluster at the top of the branches. Flowering: throughout the year but chiefly spring.

Hybridises with *Nicotiana goodspeedii*.

Nicotiana x flindersiensis is a **sterile** hybrid between *Nicotiana glauca* and *Nicotiana suaveolens*.
