Common name

Red Passion-flower

Family

Passifloraceae

Where found

Forest, rocky areact.as, and river gorges. Mainly coast and ranges. Occasionally elsewhere.

Notes

Slender hairless climber or scrambler with stems to several metres long. Fruit fleshy. Leaves **alternating** up the stems, 6–10 cm long, 40–100 mm wide, usually 3-lobed, the lobe tips blunt to pointed; margins **entire** to wavy. Leaf stalks without **glands**. **Stipules** narrow and pointed, 3–10 mm long. Flowers red, the backs of the **petals** and **sepals** greenish, flower centre yellow or yellowish green and whitish. Flowers 40–70 mm in diameter, with 5 petals, and 5 coloured sepals, the sepals much longer than the petals. Flowers single. Fruit greenish grey, at first **glaucous**, hairless, oval to oval or roundish, 1.5–3.5 cm long. Flowers Sep.–Jan.

Regarded as indigenous/**naturalised** in the ACT. All native plants on unleased land in the ACT are protected.
