Common name

Woolly pomaderris

Family

Rhamnaceae

Where found

Dry **forest** and **woodland**. Coast, ranges, and tablelands.

Notes

Tree or **shrub** to 5 m high. Stems moderately to densely hairy with rusty curly **simple** hairs obscuring fine **stellate** hairs (needs a hand lens or a macro app on your phone/tablet to see). Leaves **alternating** up the stems, 2.5–13 cm long, 15–50 mm wide, upper surface dull green, sparsely to moderately hairy with simple hairs, sometimes bristly; lower surface usually with short whitish and longer rusty curly simple hairs over short stellate hairs, with at least the **lateral veins** appearing rusty, lateral veins looping to the inside and not reaching the leaf margins, tips pointed or blunt, margins flat. Flowers golden, with 5 **sepals**, each 2–3 mm long, falling early, and 5 **petals**, each 1.5–2.5 mm long, in large branched clusters 40–120 mm in diameter.
