Common name

Mountain pomaderris

Family

Rhamnaceae

Where found

Forest, and near streams, sometimes on rocky stream banks. Ranges and tablelands south from west of Mittagong.

Notes

Shrub to 3 m high. Stems densely **stellate**-hairy (needs a hand lens or a macro app on your phone/tablet to see). Leaves **alternating** up the stems, 0.5–3 cm long, 2–15 mm wide. upper surface bristly with scattered **simple** hairs, sometimes the hairs clustered and more or less stellate; lower surface greyish with dense pale stellate hairs, and scattered, longer, rusty, simple or stellate hairs; **lateral veins** visible on both surfaces, **impressed** on the upper surface, raised and rusty on the lower surface; looping to the inside and not reaching the margins, tips blunt, margins more or less scalloped, sometimes curved down. Flowers cream, with 5 **sepals** each 1.2–2 mm long, falling early, and 0 **petals**, in narrow leafy branched clusters, not or barely longer than the leaves.

Rare Vic.
