Common name

Round-leafed wilsonia

Family

Convolvulaceae

Where found

In mud in coastal and subcoastal saltmarshes and brackish swamps, and in inland saline sites and the margins of salt lakes. Lake George and Lake Bathurst. Coastal north of Tuross **Head**.

Notes

Shrub with **prostrate** stems, rooting from the **nodes**, more or less hairy with **spreading** hairs. Leaves fleshy, **alternating** in neat rows along the stems, 0.15–0.7 cm long, 1–3 mm wide, hairy when young, more or less broad-oval with pointed tips, to oblong-spoon-shaped with blunt tips, stalkless, or with short stalks. Flowers white, cream or yellow, with a bell-shaped tube 4.5–5 mm long, and 5 lobes each 2–3 mm long. Flowers single. Flowering: mainly spring–summer.

Endangered NSW. Provisions of the NSW Biodiversity Conservation Act 2016 No 63 relating to the protection of protected plants generally also apply to plants that are a threatened species.
