

Distribution by botanical region - Victoria

The botanical regions adopted here are used as botanical divisions by the National Herbarium of Victoria.

The botanical region characters should be used carefully. If a specimen comes from near the boundary between two or more regions, select several regions to allow for range extensions or geographic imprecision.

Distribution data for this character were derived from the *Flora of Victoria, vol 3* (1996), and from the Australian National Herbarium specimen database.

Murray and Lowan Mallee

Covers the sand-plain or sand-dune country of north-western Victoria. This region is a combination of the Murray Mallee and the Lowan Mallee as used by the National Herbarium of Victoria.

Wimmera

Covers the sedimentary plains country of central-western Victoria.

Wannon

Covers the coastal and near-coastal calcareous and laterite plains country of south-western Victoria, centred around the Glenelg River.

Grampians

Covers the sandstone ranges and valleys of the Grampian Ranges in western Victoria.

Riverina

Covers the riverine plains of northern Victoria.

Midlands

Covers the low undulating range country of central Victoria.

Victorian Volcanic Plain

Covers the basalt plains and stony rises of south-western Victoria.

Otway Plains

Covers the plains bordering the south-western coastline of Victoria.

Otway Range

Covers the Otway Ranges in southern central Victoria.

Eastern Highlands

Covers the mid-elevation ranges of north-eastern and eastern Victoria.

Gippsland Plains

Covers the sedimentary plains of south-eastern Victoria. This includes Phillip and French Islands and islands in the Corner Inlet to Port Albert area.

Gippsland Highlands

Covers the Strzelecki Ranges and associated hills in southern Victoria.

Wilson's Promontory

Covers Wilson's Promontory south of the Yanakie Isthmus, including the inshore islands north of Rodondo Island.
