

Plants of South Eastern New South Wales

Flowering stems. Australian Plant Image Index, photographer Murray Fagg, near Numeralla east of Cooma

Pod and 'leaves'. Australian Plant Image Index, photographer Murray Fagg, near Numeralla east of Cooma

Shrub. Australian Plant Image Index, photographer Murray Fagg, near Numeralla east of Cooma

Common name

A wattle

Family

Fabaceae

Where found

Woodland, often on ridge crests and steep valley sides. Tablelands and the western edge of the ranges, north from the Cooma district to west of Wollongong.

Notes

Shrub to 1.8 m tall. Branchlets cylindrical, ridged, densely yellow-hairy. 'Leaves' **alternating** up the stems, 0.8-2 cm long, 4-12 mm wide, green to grey-green, hairy, **midvein** fairly prominent, margins more or less flat and yellow-green, tips pointed with a **mucro**, 1 **marginal gland** mostly up to 1 mm above the base or occasionally absent. Flower **heads** yellow to cream, with globular heads, 4-7 mm in diameter, 18-30 flowered (easiest seen in late buds), single. Flowers in the warmer months.

Was ***Acacia uncinata***.

Family was Mimosaceae.
