

Plants of South Eastern New South Wales

Flowering stem. Australian Plant Image Index, photographer Murray Fagg, near Rylstone

Flowering stems. Australian Plant Image Index, photographer Murray Fagg, near Condobolin

Pods and 'leaves'. Australian Plant Image Index, photographer Murray Fagg, west of Mblong

Shrub. Australian Plant Image Index, photographer Murray Fagg, Killonbatta State Forest, Gumble to Mblong

Common name

A wattle

Family

Fabaceae

Where found

Woodland and **grassland**. North and west from Yerranderie (in the Blue Mountains) and Mudgee.

Notes

Shrub to 2m or more tall. Branchlets ridged, sometimes more or less cylindrical, hairy. 'Leaves' **alternating** up the stems, 0.7-1.8 cm long, 4-14 mm wide, light to dark green-grey or green, sparsely hairy or hairless except for hairs confined to the leaf stalk or extending onto the margins and the **midvein**, midvein fairly prominent, **lateral veins** faint, margins mostly wavy, bases with one side longer than the other, tips pointed or blunt, sometimes more or less squared off, with a **mucro** less than 2 mm long. 1 **marginal gland** to 1 mm above the base. Flower **heads** yellow, globular, 4-8 mm in diameter, 18-26 flowered (easiest seen in late buds), single in the leaf **axils**. Flowering: throughout the year.

Family was Mimosaceae.
