

# Plants of South Eastern New South Wales

Flowering stems and leaves. Australian Plant Image Index, photographer Murray Fagg, Australian National Botanic Gardens, Canberra

Pods and leaves. Australian Plant Image Index, photographer Murray Fagg, Australian National Botanic Gardens, Canberra

## Common name

A wattle

## Family

Fabaceae

## Where found

Dry **forest** and **woodland**, often on stony ridges. Ranges and the eastern edge of the tablelands north of inland from Jervis Bay.

## Notes

**Shrub** to 4 m tall. Bark smooth. Fleshy seed stalks/**arils**. Branchlets angled to cylindrical with ridges, hairy with minute hairs, or hairless. Leaves **alternating** up the stems, **compound**, **rachis** 1-7.5 cm long, hairy to hairless, a small round more or less **jugary gland** present at the base of or just below each pair of **pinnae** except at the basal pinnae, rarely missing from the others, **interjugary glands** absent. 4-22 pinnae, 0.5-4 cm long, each with 8-42 leaflets each 0.25-0.6 cm long, 0.8-2 mm wide, hairless, or hairy with minute hairs mainly on the margins. Flower **heads** cream to yellow, globular, 8-15 flowered (easiest seen in late buds), 5-8 mm in diameter, in elongated clusters of 6-25 flower heads. Flowers Winter to Spring, occasionally late Summer.

Family was Mimosaceae.
