

Plants of South Eastern New South Wales

Common name

A wattle

Family

Fabaceae

Where found

Forest and **woodland** in the higher Blue Mountains.

Notes

Shrub to 3 m tall. Fleshy seed stalks/**arils**. Branchlets ridged or angled becoming somewhat cylindrical, smooth or with a few small warts, moderately to sparsely hairy. 'Leaves' **alternating** up the stems, 1-3.5 cm long, 6-26 mm wide, rotated to 30–60° from the plane of the branchlets or rarely vertical, surfaces green to grey-green or blue-green, sparsely hairy or hairless, **midvein** somewhat prominent, margins wavy, tips gradually tapering to a point, or pointed or blunt and with a **mucro**, 1 **gland** to 1/8 the length of the 'leaf' above the base.. Flower **heads** pale yellow, globular, 5-9 mm in diameter, 20-30 flowered (easiest seen in late buds). Flower heads single.

Family was Mimosaceae.
