Common name

A grevilllea

Family

Proteaceae

Where found

Forest and rocky sites. SE Forests National Park, Bemboka section.

Notes

Shrub to 4 m high. Branchlets round or almost round to biconvex in cross section, with several longitudinal ridges, densely hairy with two-armed and **simple** hairs. New growth rusty or apricot-coloured, soon becoming green, young branchlets often remaining pale apricot-coloured. Leaves **alternating** up the stems, 1.7-8.5 cm long, 8.5-25 mm wide, upper surface glossy, lower surface densely hairy, margins **entire**, rolled. Flowers with 4 '**petals**' joined together in pairs, '**petals**' red or reddish pink with apricot-coloured, brownish grey, or light rusty tips, hairy outside, hairless inside below the beard. Very early flower buds wholly apricot-

coloured. **Gynoecium** 16-21 mm long, **style** red or reddish pink, almost hairless. Flowers in dense clusters. Flowers sporadically.

In the absence of specific information, seeds of all species of *Grevillea* have been keyed as having one **wing**.

Description based on that in Stajsic, V. & Molyneux, W.M. (2005), Taxonomic studies in the *Grevillea victoriae* F.Muell. species complex (Proteaceae: Grevilleoideae) I. Descriptions of nine previously segregated, and three new taxa. *Muelleria* 22: 28-32, Fig. 1 (map)

In *PlantNET* but no description (19 February 2021)
