

Plants of South Eastern New South Wales

Flowering branches. Photographer Don Wood, Namadgi National Park, ACT

Flowering shrub with fruit. Photographer Don Wood, Mongarlowe east of Braidwood

Stem with ripe fruit. Australian Plant Image Index, photographer Murray Fagg, Eurobodalla Regional Botanic Gardens north of Mbruya

Common name

Dwarf Geebung, Yellow Geebung

Family

Proteaceae

Where found

Forest, woodland, and roadsides. Ranges, tablelands, ACT, the mountains to the west, Kosciuszko National Park, and the mountains west of Kosciuszko National Park towards Albury.

Notes

Prostrate or sprawling **shrub** to about 0.3 m high. Bark poorly developed. Young branchlets sparsely hairy to hairless. Leaves **alternating** up the stems or irregularly **whorled**, 0.8–3 cm long, 1–2 mm wide, flat to concave in cross section, bright green, surfaces smooth, usually hairless. Flowers yellow, with 4 '**petals**' each 9–13 mm long, more or less fused at the base, hairless, rarely sparsely hairy. Flowers **erect** to curved down, mostly **subtended** by leaves, in 1–20-flowered clusters. Flowers Summer to Autumn. Fruit hard and dry, yellow-green to green, or reddish to purple, hairless.

Hybridises sporadically with *Persoonia asperula*, *Persoonia confertiflora*, and *Persoonia linearis* where they grow together.

Protected NSW.

All native plants on unleased land in the ACT are protected.
