

Plants of South Eastern New South Wales

Flowering stem. Photographer Jackie Miles

Flowering stems. Photographer Don Wood, north of Berragui

Common name

Bodalla pomaderris

Family

Rhamnaceae

Where found

Forest, woodland, stream banks, and gullies. Coastal south from Batemans Bay to south of Eden. Ranges east from Brown Mountain, and inland from Bodalla. The largest population occurs north of the area covered by this key, in Wollemi National Park.

Notes

Shrub to 4 m high. Young stems with **spreading** rusty **simple** hairs and dense greyish **stellate** hairs (needs a hand lens or a macro app on your phone/tablet to see). Leaves **alternating** up the stems, mostly 2–3 cm long, 12–15 mm wide, upper surface dark green and hairless with **veins** not or slightly **impressed**, obscure or looping and not reaching the margins, lower surface hairy with sparse spreading rusty hairs above short greyish stellate hairs, margins **entire** but more or less wavy. Flowers cream, mostly about 2 mm long, with 5 **sepals** falling early, and 0 **petals**, in many-flowered branched clusters.

Vulnerable NSW. Provisions of the Biodiversity Conservation Act 2016 No 63 relating to the protection of protected plants generally also apply to plants that are a threatened species.
