

Plants of South Eastern New South Wales

Common name

A Solengyne

Family

Asteraceae

Where found

Forest and **grassland**. Mainly Sydney area and the mountains to the west. Occasionally elsewhere.

Notes

Perennial herb. Flower stalks 3–22 cm long, slender, about 0.5 mm in diameter. Leaves basal, 2–7 cm long, 6–20 mm wide, both surfaces more or less hairless to hairy, tips blunt, often with a distinct group of 3, more or less equal, closely spaced pointed teeth. Flower **heads** single, 5–7 mm in diameter, bell shaped to hemispherical. '**Petals**' white to bluish; about 0.7 mm long. Flowering: spring–summer. **Bracts appressed** to the flower heads bent sharply down at the seeding stage.
