## Common name

A Solengyne

## Family

Asteraceae

## Where found

**Forest**, **woodland**, and **grassland**, often persistent in **lawns**. Widespread. Rare on the coast and Western Slopes.

## Notes

**Perennial** herb to 0.11 m high. Flower stalks robust, about 0.5-1 mm in diameter. Stems hairy to rough. Leaves basal, 1–11 cm long, 5–22 mm wide, surfaces sparsely to densely hairy, margins with 1–15 teeth, often confined to the upper half of the leaf, occasionally scalloped or wavy, tips blunt. Flower **heads** 3–7 mm in diameter, hemispherical. '**Petals**' pale to magenta or purplish, minute. Flower heads single. Flowering: spring–autumn. **Bracts appressed** to the flower heads **erect** at the seeding stage.

All native plants on unleased land in the ACT are protected.
