

Plants of South Eastern New South Wales

Flower on stem. Photographer John Tann, Lucas Heights, Sydney

Flowering plant. Photographer John Tann, Lucas Heights, Sydney

Common name

None

Family

Hemerocallideae

Where found

Wet **forest** and **heath**. Coast and ranges north from Jervis Bay.

Notes

Perennial herb to about 0.3 m high, **rhizomatous**. Flowering stems rarely branched, usually angular and hairless. Leaves basal, 6–25 cm long, 1–5 mm wide, surfaces hairless or rough. Flowers yellow, with 6 '**petals**' each 5–9 mm long. **Stamen filaments** with a tuft of long hairs below the **anthers**. '**Petals**' spirally twisted after the flowers have been pollinated. Flowers in clusters of 6–20-flowers or more, often appearing single. Flowering: August–December.

Family Anthericaceae in PlantNET.
