Bean angular leaf spot (216)

Photo 1. Spots on trifoliate leaves caused by the angular leaf spot fungus, *Pseudocercospora griseola*.

Photo 2. Angular leaf spot, *Phaeoisariopsis griseola*, on French bean. Some spots joining together, but many limited by the veins.

Photo 3. Large oval to circular spots on pods of bean caused by the fungus, *Pseudocercospora griseola*.

Summary

- Worldwide. In sub-tropics and tropics. On many types of beans. An important disease; high pod loss.
- Spots on primary leaves round, brown, zoned, up to 10 mm; smaller, 3 mm, angular, spots on trifoliate leaves. Dark, sunken spots on stems and pods.
- Spread is by spores in wind; also on seed.
- Cultural control: certified seed; collect and burn trash after harvest; do not plant overlapping crops.
- Chemical control: treat seed with carbendazim; if fungicides are needed in the field use copper or mancozeb.

Common Name

Angular bean leaf spot

Scientific Name

Pseudocercospora griseola; previously known as *Phaeoisariopsis griseola* and *Isariopsis griseola*. Several strains of the fungus are known.
