

## Pacific Pests, Pathogens & Weeds - Mini Fact Sheet Edition

<https://apps.lucidcentral.org/ppp/>

### Bele (Abelmoschus) leafhoppers (039)

Photo 1. Adult jassid, *Amrasca ?devastans*, on the underside of a *bele* leaf.

Photo 2. Close-up adult jassid, *Amrasca ?devastans*, on the underside of a *bele* leaf.

Photo 3. Yellowing and crinkling of leaves of *bele* infested by the jassid leafhopper, *Amrasca ?devastans*.

Photo 4. The plant with the highly dissected leaf in the foreground appears tolerant to jassids - compare with those behind.

Photo 5. Variety of *bele* from Solomon Islands that appears tolerant to infestations of the jassid, *Amrasca ?devastans*. (Needs verification.)

### Summary

- Narrow distribution, Asia and Oceania (but not confirmed). On bele (*aibika*, *sliperi kabis*, island cabbage, *Abelmoschus manihot*), cotton, okra, beans, eggplant, peanut.
- Eggs laid on leaves; nymphs green-yellow, like the adults but wingless; both feed on leaves causing crinkling, yellow patches,

sometimes white edges.

- Even small numbers cause damage, perhaps injecting toxic saliva when feeding. Worse in dry times.
- Natural enemies: ladybird beetles, parasitoid wasps, spiders.
- Cultural control: test varieties for resistance.
- Chemical control: PDPs: neem, derris, pyrethrum, or chill; spinosad or Bt (*Bacillus thuringiensis*); or synthetic pyrethroids, but they will kill natural enemies.

### Common Name

Green or Indian cotton jassid (or leafhopper). These are the common names given to *Amrasca devastans*, but the species in the Pacific has not been identified.

### Scientific Name

Most likely *Amrasca biguttula biguttula*; previously, *Amrasca devastans*, and *Empoasca devastans*.
