Wrightia versicolor S.T.Blake

**Family:** Apocynaceae

**Stem**

Tree to 20 m tall, deciduous. Copious latex in bark.

**Leaves**

Leaves glabrous, or with scattered hairs, petiole 8-10 mm long. Blade broadly elliptic, elliptic to lanceolate-elliptic, to 13 cm long x 3 cm wide, base cuneate, apex acuminate, dark green above and pale green on underside. Veins 12-18 on each side of midrib.

**Flowers**

Inflorescence a cyme comprised of several fascicles each of 3-8 flowers. Flowers fragrant. Corolla yellow to orange; tube 4-7 mm long; lobes lanceolate-ovate, 8-12 mm long, densely hairy on both surfaces. Corona of 10 discrete lobes 2.5-5 mm long.

**Fruit**

Fruit 11-24.5 cm long, lenticellate. Seeds narrowly oblong, 9-13 mm long; coma 25-35 mm long.

**Seedlings**

Features not available.

**Distribution and Ecology**

Occurs in CYP, NEQ and CEQ. Altitudinal range from near sea level to 750 m. Grows in monsoon forest and vine thickets.

**RFK Code**

3581
